**4. (2019).** Arora, P. *The Next Billion Users: Digital Life beyond the West*, Harvard University Press [**Winner of the 2019 PROSE Award in the Business books category**]

**Engadget** (*Top 5 in the "Technorati top 100" and reported by Time for being one of the "best blogs" on tech*) "The most interesting, thought provoking books on science and technology we can find"

### **Times Higher Education**

"This powerful book explores actual online lives in China, India and Brazil and asks why many of us in the West are surprised and sometimes offended by the fact that the impoverished are just as committed as we are to the search for "moments of pleasure and joy".

### **Engineering and Technology magazine**

"Superb... uncomfortable, myth-busting and compelling, The Next Billion Users' challenges our collective superiority complexes and questions the way we see technology in the connected world."

### **Theodore Kinni, Strategy + Business**

"The conventional storyline around the transformative effect of technology on people's lives often doesn't ring true... Any leader whose company sees the global poor as a key market will find its reality-based view of the intended customers bracing and useful."

### **Irenaeus Regnauld, Digital Society Forum**

"A 'must-read' for anyone interested in digital uses around the world... A priceless study, tremendously documented."

### **The Nation**

"Arora shows that many of the world's poor don't seek out the Internet as a tool to become more productive, but as a welcome outlet for economically 'unproductive' play... That the Internet fails as a magical cure-all for historical circumstance may be unwelcome news to techno-utopians and overzealous development practitioners, but there is hope in its capacity to augment and expand human leisure beyond the realm of material advancement."

### **Marwan Kraidy, Author of *The Naked Blogger of Cairo***

"The Next Billion Users is a feat – insightful, poignant, riveting. Through detailed case studies and interviews, Payal Arora rewrites the story of our relationship to digital technology from a truly global perspective. Her conclusions are as surprising as they are

revealing about the future of social media, gaming, mobile phones, and online commerce and education.”

**Ronaldo Lemos**, Director of the *Institute for Technology & Society of Rio de Janeiro*  
 "The Next Billion Users is mandatory reading for anyone interested in understanding the future of technology or designing applications that are truly valuable for the majority of the people on the planet."

**Justin van Fleet**, Director of the *International Commission on Financing Global Education Opportunity*

“A must-read for any individual seeking to promote economic growth and development in the digital age. Arora's deeply rooted research exposes digital stereotypes as well as the perils and opportunities which exist at the interplay of culture, technology, regulation, commerce, and the next generation of digital users.”

**Shaun Wiggins**, President and CEO of *Soteryx*

“Whether you are a government agency seeking to bring public goods and services to underprivileged citizens, a multinational corporation entering emerging markets, or an NGO implementing aid, The Next Billion Users is mandatory, data-driven reading that will guide your digital and real-world strategies.”

\*(June 2014): Interview with Imperica magazine (Oxford, UK)

#### BOOK ENDORSEMENTS

Foreword by **Arjun Appadurai**, *Paulette Goddard Professor of Media, Culture, and Communication, New York University*

*Excerpt:* “Arora offers us another invitation, which is a refreshing departure from the breathlessness of many studies of the new technologies, and that is the chance to slow down, to pause, to contemplate our surroundings, to smell a possibly political rose. That she finds this potential in the very heart of digitality is one of the many surprises of this thoughtful and wide-ranging book.”

**Saskia Sassen**, *Columbia University and author of *Expulsions: Brutality and Complexity in the Global Economy**:

“This is a brilliant navigation of worlds that are not usually brought in conversation: digital space and thick situated struggles engaged in claim-making in the urban sphere. Payal Arora has deep knowledge and experience of both these worlds. Out of this encounter comes a concept the author deploys in diverse ways to mark digital space: the leisure commons.”

**Zizi Papacharissi**, *Professor and Head of Communications, University of Illinois at Chicago*

“In this engaging volume, Arora applies the rich metaphor of the public park to explicate the many ways in which net-based technologies facilitate, but also converge activities of a social, political, cultural and economic nature. Technology as architecture invites, amplifies, but also conceals or discourages. It disrupts and it sustains our daily endeavors into sociality, work, play and fantasy. Arora uses the metaphor of public parks to tell the story of how digital media support us through our daily lives. Through lively writing and layers of intriguing analogies, she compels the reader to think with her, as she explores what technology does to space. Arora lays out an intriguing vision of online environments as technology supported meta-parks that facilitate not just limitless connection, but, better living.”

**Paul C. Adams**, *Associate Professor of Geography and Director of Urban Studies, University of Texas at Austin*

“Payal Arora offers the insight that social media are the latest chapter in a long history of spaces including city parks, walled gardens, office parks, fantasy theme parks and other semi-public, leisure-oriented environments. By framing new technological trends in terms of a “leisure commons,” her work fills a gap that remained between the spatial metaphors that have proven helpful to make sense of new technologies, and a nuanced realization of how thoroughly leisure practices have permeated daily life.”

(June, 2014). Podcast with *New Books on Technology* on the book

### **BOOK REVIEWS**

***The Journal of Popular Culture*** (Dec 2015) by Kiranjeet Dhillon, University of Wisconsin Milwaukee, USA.

*Excerpt:* “Readers will value Arora’s argumentative advances from chapter to chapter. Arora thoroughly explains and articulates The Leisure Commons and appeals to a vast inter-disciplinary audience of media, rhetorical, visual culture, critical/culture studies, history, and geography scholars. In particular, media and rhetorical scholars will find that Arora’s metaphorical framework offers insight in regards to the digital public sphere, leisure space, virtual activism, online privacy, digital labor, and globalization of virtual networks. Media and communication scholars will appreciate this insight, which illuminates and compels readers to analyze and theorize the rhetorics of the public sphere, digitality, and leisure space through a new heuristic vocabulary.”

**IEEE Annals of the History of Computing** by Kevin Driscoll, Microsoft Research, USA.

*Excerpt:* "One of Arora's goals in *The Leisure Commons* is to put the critical study of social media in dialogue with the interdisciplinary body of research on urban parks. Readers will be quickly convinced by Arora's wide-ranging exploration of park metaphors that the two fields share a number of core theoretical concerns."

1. **Arora, P. (2010/2016).** *Dot com mantra: Social computing in the Central Himalayas.* Ashgate, UK (reprint in 2016)

### BOOK ENDORSEMENTS

Foreword by **Mark Warschauer**, *Professor of Education and Informatics, University of California, Irvine.*

*Excerpt:* "Few efforts to do so are more successful than that of this book. Payal Arora takes on a research task that few have sufficiently valued and far fewer have accomplished: becoming one with a community and its people, gaining their trust, examining how they make use of technology according to their own context and needs, and revealing that to the world in all its nuance, biased by neither sentimentality nor judgment."

**Arvind Singhal**, *Samuel Shirley and Edna Holt Marston Professor, University of Texas @ El Paso, and William J. Clinton Distinguished Fellow,*

*Clinton School of Public Service, AR.*

"A towering piece of research and writing, imbued with theoretical and methodological vigor, and sensitively illuminating the intersections of digital media and human ingenuity in the Central Himalayas. A must read."

**Michael Woolcock**, *Senior Social Scientist at the World Bank and Lecturer in Public Policy at the John F. Kennedy School of Government at Harvard.*

"In every age, innovative technology has been met with an awkward mixture of enthusiasm, indifference, skepticism and hostility. The advent in our time of cheap, mobile computing and cellular telephones has drawn a similar response, especially in the international development community. In *Dot.Com Mantra*, Payal Arora goes beyond the familiar juxtapositions to show how poor individuals and communities actively negotiate their engagement with twenty-first century technology, documenting the conditions under which they use, abuse and reject it in their everyday lives. The result is a book that is fascinating in its own right, but also highly instructive to a new generation of development policymakers, in rich and poor countries alike, caught between an imperative for easy answers and the reality of messy complexity."

### BOOK REVIEWS

**The Journal of Education, Community and Values** by Jeffrey Barlow, Director of the Berglund Center for Internet Studies at Pacific University Oregon, USA; holds the Matsushita Chair of Asian Studies, & Founding Editor of *The Journal of the American Association for History and Computing.*

*Excerpt:* "Dot Com Mantra is an excellent work by Payal Arora, a much-published Indian anthropologist who writes frequently on social computing, that is, the connection between society and the use of computers. This study is an

ethnography (a branch of anthropology dealing with the scientific description of individual cultures) done in the town complex of Almora, in a fairly isolated area of Uttarakhand, India, formerly Uttar Pradesh...Arora's insights are deeply rooted in a close knowledge of both practical and theoretical pedagogy and anyone interested in education could benefit from understanding this aspect of her research. Part of her progress here might be said to be "unlearning," as she finds that many of the assumptions are simply irrelevant in the social context of village India. For example, after working in the Internet café, she comes to understand the limitations of Western attitudes toward plagiarism..."

***The British Journal of Educational Technology*** by Giuliana Dettori, Researcher at the Institute for Educational Technology of CNR, Genoa, Italy

*Excerpt:* "This is not the usual study on learning with computers. Traditional readers will likely fail to appreciate the ethnographic aspects of this study. The book, however, makes a pleasant and stimulating read for whoever wishes to reflect on educational technologies from a different perspective."

***The Australian Journal of Anthropology*** by Ilana Gershon, Department of Communication and Culture, Indiana University

*Excerpt:* "Dot Com Mantra can be used effectively in upper-level development studies courses and technology studies courses to explore how technologies such as computers travel."

***Information Technologies & International Development***, by Heather A. Horst, Vice Chancellor's Senior Research Fellow RMIT University School of Media and Communication Melbourne

*Excerpt:* "Payal Arora's Dot Com Mantra represents one of the few studies that integrates critical development studies and ICTD with a sociocultural learning perspective, and thus offers a unique vantage point for understanding the development of knowledge and expertise."
